

Tom Garrett

TECHNICAL PRODUCT MANAGEMENT • DESIGN — CODE — PRODUCT

tgarrett.92@icloud.com • linkedin.com/in/thomasgarrett-digital • productdevelopment.ie • Dublin, Ireland

Product-led engineering leader with ten years across **design, code and product**. I currently lead product delivery at DepositCloud, a regulated US rental-payments platform serving **250,000+ customers**, where I own roadmap execution across three applications. I founded DocuDynamics and took it from **idea to funded MVP in five months**, and I advise early-stage Irish companies on product engineering. I do the full product job: discovery and user research, prototyping, experimentation, and shipping — because I can design it, build it, and measure it myself.

PRODUCT SKILLSET

- **Discovery & validation** — user research, UX prototyping, Hotjar/session analysis, data-led feature kill/scale decisions
- **Experimentation & rollout** — feature flags (Flipper), staged releases, analytics instrumentation, measurable launch criteria
- **Delivery & roadmapping** — Agile planning, multi-phase initiative scoping, cross-timezone execution, stakeholder management
- **Regulated-domain product** — US FinTech/PropTech, SOC 2 Type I, security & compliance as product constraints
- **Technical fluency** — Ruby on Rails, React, Node, SQL/PostgreSQL, GCP, CI/CD, API integration design (Yardi, Entrata, RealPage, Rent Manager, Twilio, Stripe, Salesforce)

EXPERIENCE

DepositCloud

IRELAND (US MARKET)

Multi-tenant Rails SaaS managing the full US rental security-deposit lifecycle for property management companies and multifamily operators.

Director of Product Engineering

Jul 2026 — Present

Lead Product Engineer

Jun 2024 — Jul 2026

- Own product delivery across **three applications** serving **250k+ customers** (85k+ active accounts, 160k+ enrollments onboarding) — roadmap, prioritisation and release planning executed with a distributed team of **8 engineers**.
- Partnered with company leadership to **redesign core user journeys end-to-end**, using rapid prototyping and production data to validate each change before full rollout.
- Introduced **feature flags with analytics** (Flipper) as the standard launch mechanism — every significant feature now ships behind a flag with defined success metrics.
- Scoped, built and launched a **Twilio-based contact-centre product in under three months**, reducing average handling time, eliminating 100% of third-party vendor costs, and giving operations real-time visibility they previously lacked.
- Defined and delivered a greenfield **PMS Sync & Data Analytics product**, designing two-way API integrations with Yardi, Entrata, RealPage and Rent Manager — the integrations that unlock enterprise property-manager accounts.
- Sustained delivery cadence of **900+ merged PRs and 18-25 major multi-phase initiatives over 24 months** through structured Agile planning, weekly one-to-ones and clear initiative scoping.
- Cut release cycle **from two weeks to under four hours** by re-architecting CI/CD (Docker, GitHub Actions) — turning releases from a scheduling constraint into a product decision.
- Drove **SOC 2 Type I compliance** with penetration testing and automated vulnerability scanning integrated into CI — compliance treated as a product requirement, not an afterthought.

Product Consultant & Adviser

2024 — PRESENT

Advisory and hands-on product engineering for early-stage Irish companies.

- **Guest Nutrition** (2024 – present) — product adviser to an Enterprise Ireland High Potential Start-Up; took the product **from 0 to 1** and into active trials with industry-leading operators.
- **WealthGuard** (2025 – present) — designed and built a complete wealth-management application (Ruby on Rails), now in production use by **100+ high-net-worth clients**.

DocuDynamics — Founder

Nov 2022 — Jun 2024

Compliance-automation startup. The closest job there is to product management: everything from customer discovery to production code.

- Designed and shipped the entire **v1 web product from idea to funded MVP in five months** (React, Node, AWS), securing **Microsoft for Startups** and **New Frontiers Phase 2** backing.
- Owned the critical user workflow — **document upload → AI processing → collaboration** — iteratively rebuilding friction points identified through direct user observation.
- Prototyped and validated major UX and architecture changes **in production, using data to kill features or double down** — the discipline of shipping small and measuring honestly.

Penco — Digital Operations Manager

Dec 2019 — Nov 2022

- Owned end-to-end delivery of web and mobile features, combining **user research with full-stack implementation**, consistently shipping production-ready work in 1–2 week sprints.
- Designed and shipped a **Salesforce CRM integration** that eliminated **60% of manual data entry**, directly increasing operational capacity by **40%**.
- Introduced **Hotjar for same-week user testing**, cutting feature validation time by **70%** and embedding a rapid-prototyping culture in the team.
- Featured in **The Sunday Times (Business, Jul 2020)** on how Irish SMEs can become data-driven, drawing on this work.

Earlier roles

2016 — 2019

- **Full Stack Developer**, Gambling.com Group, Dublin (Jan – Dec 2019).
- **User Experience Designer**, GRID Finance, Dublin (Jan 2018 – Jan 2019) — research, journey mapping and interface design for an SME lending platform.
- **Multimedia Designer**, Associated Newspapers (Jun 2017 – Jun 2018) · Cauldron Recording Studios (Jun – Sep 2016), Dublin.

EDUCATION & FURTHER STUDY

- **Professional Academy Diploma, Advanced Artificial Intelligence for Business** — UCD Professional Academy. Jul – Nov 2026, in progress.
- **BA (Hons), Digital Art** — IADT Dún Laoghaire, NFQ Level 8. 2013 – 2017, second-class honours (2.1).
- **New Frontiers, Phase 2** — TU Dublin. Oct 2022 – Mar 2023.
- **Professional Diploma, Digital Marketing** — Waterford Institute of Technology. 2018 – 2019.

RECOGNITION

- New Frontiers Phase 2 (TU Dublin) · Microsoft for Startups · The Sunday Times feature, July 2020.
