TECHNICAL PRODUCT MANAGEMENT · PLATFORM ECOSYSTEMS & ARCHITECTURE

tgarrett.92@icloud.com · linkedin.com/in/thomasgarrett-digital · tomg926.github.io/Tom-Garrett-Technical-Product-Management · Dublin, Ireland

Technical product leader with ten years across software architecture, UX and platform ownership, working from an engineering background I still use daily. I own the roadmap for a **multi-tenant B2B SaaS platform serving 250,000+ customers** across three applications, and I took its communications layer from problem definition to production on **Twilio Programmable Voice** — a browser-based, nine-language contact centre now carrying **~5,000 calls a month**. I design the **API contracts and event-driven integrations** that unlock enterprise accounts, and I write code alongside the roadmap, so architectural trade-offs get made with engineering rather than handed to it.

PRODUCT & TECHNICAL SKILLSET

- **APIs, platforms & integrations** — API contract design, bi-directional sync, webhook idempotency and replay, SDK and developer experience, third-party platform APIs
- **Communications & event-driven systems** — Twilio Programmable Voice (conferences, Voice SDK, status callbacks), HubSpot and Salesforce CRM integration, WebSockets, Redis-backed state, queue-driven pipelines
- **Data-heavy products** — ingestion pipelines (open banking, document AI), analytics instrumentation, feature flags (Flipper), reporting and cohort analysis at 250k+ customer scale
- **Discovery & validation** — customer interviews and remote feedback sessions, discovery and feature-planning workshops, UX prototyping, Hotjar/session analysis, data-led feature kill/scale decisions
- **Delivery & cross-functional leadership** — Agile planning, multi-phase initiative scoping, cross-timezone execution, leading engineering, design and operations without formal authority
- **Engineering fluency** — Ruby on Rails, React, Node, SQL/PostgreSQL, GCP/AWS, Docker, CI/CD, system architecture; SOC 2 Type I in a regulated US FinTech/PropTech domain

EXPERIENCE

DepositCloud

IRELAND (US MARKET)

Multi-tenant Rails SaaS managing the full US rental security-deposit lifecycle for property management companies and multifamily operators.

Technical Product & Engineering Director

Aug 2025 – Present

Lead Technical Product Engineer

Jun 2024 – Aug 2025

- Own the product roadmap across **three applications serving 250k+ customers** (85k+ active accounts, 160k+ enrollments onboarding), aligning a distributed team of **8 engineers** plus design and operations on priorities and release cycles — influence rather than reporting lines.
- **Twilio contact centre, 0→1: production calls inside three months**, then fifteen months of continuous delivery. Defined the problem, designed the architecture and shipped a browser-based contact centre on **Twilio Programmable Voice** — nine-language IVR, language-aware round-robin routing, and a two-party conference per call so warm transfer, hold and supervisor barge became participant operations rather than teardowns. Now carries **~5,000 calls a month** across **28 webhook and agent-action endpoints**, cut average handling time, and eliminated **100% of third-party vendor licensing costs**.
- Extended that platform into the commercial stack with a **bi-directional HubSpot CRM integration**: call events log activity and contacts against the customer record, tickets are raised from the call itself, and both systems stay in sync — so a support conversation and the account it belongs to are never two separate records.
- Hardened the platform against the failure modes of a **distributed, event-driven telephony system** — carrier rejections, duplicate and out-of-order webhooks, and agent availability split between PostgreSQL and Redis — specifying idempotent handlers and explicit compensation that rolls agent state back when a conference dial fails. A written incident review converted a class of silent failures into visible, recoverable ones.
- Owned the greenfield **PMS Sync & Integration product** end to end, designing **bi-directional API contracts** with Yardi, Entrata, RealPage and Rent Manager — the integrations that unlock enterprise-tier property-management accounts — plus Stripe and Salesforce across the wider platform.
- Made **feature flags tied to analytics** (Flipper) the standard launch mechanism, with success metrics agreed before rollout, so features are scaled or killed on production evidence instead of opinion.
- Run **remote discovery and feedback sessions directly with US clients**, turning the operational pain points they describe into the contact-centre and sync roadmaps; partnered with leadership to translate strategic objectives into **rapid prototypes validated against production data** before full rollout.
- Cut release cycle **from two weeks to under four hours** by re-engineering CI/CD (Docker, GitHub Actions), and sustained **900+ merged PRs and 18–25 multi-phase initiatives over 24 months** — including **47 schema migrations against a live product**.
- Treated security as a product requirement, embedding **SOC 2 Type I compliance**, automated penetration testing and vulnerability mitigation directly into the roadmap.

Product Consultant & Adviser

2024 – PRESENT

Advisory and hands-on product engineering for early-stage Irish companies.

- **Guest Nutrition** (2024 – present) — product adviser to an Enterprise Ireland High Potential Start-Up (HPSU); run **product discovery and technical feature-planning workshops** that set the roadmap, and guided the product from **0 to 1** into active industry field trials.
- **WealthGuard** (2025 – present) — scoped the product specification and built a robust wealth-management application in Ruby on Rails, now in active production use by **100+ high-net-worth clients**.

DocuDynamics — Founder

NOV 2022 – JUN 2024

Compliance-automation startup. End-to-end product development, from customer discovery to production code.

- Designed and launched the entire **v1 web application from concept to funded MVP in five months** (React, Node, AWS), securing **Microsoft for Startups** and **New Frontiers Phase 2** backing.
- Mapped the critical user workflows — **document upload** → **AI pipeline** → **collaboration** — and continuously optimised systemic friction points through **20+ user interviews** and direct observation.
- Cultivated a culture of disciplined experimentation, using real-time production analytics to **kill low-engagement features** and scale high-value workflows.

Penco — Digital Operations Manager

DEC 2019 – NOV 2022

- Ran **continuous user interviews with mortgage clients** on a custom-built **mortgage application and appraisal platform** — streamlining the application journey, identifying the pain points that set the backlog, and testing new features with the people who used them.
- Managed end-to-end delivery of web and mobile features, aligning that research with sprint goals to ship production-ready work inside **two-week iterations**.
- Designed a custom **Salesforce CRM integration** strategy that eliminated **60% of manual data entry** and increased operational capacity by **40%**.
- Embedded rapid product validation frameworks by introducing **Hotjar** for user testing, cutting feature evaluation lifecycles by **70%**.
- Featured in **The Sunday Times** (Business, Jul 2020) on leadership in helping Irish SMEs build data-driven operations.

Earlier roles

2016 – 2019

- **Full Stack Developer**, Gambling.com Group, Dublin (Jan – Dec 2019) — build and **user testing for a US-market gambling comparison iOS app**.
- **User Experience Designer**, GRID Finance, Dublin (Jan 2018 – Jan 2019) — journey mapping and application interfaces for an SME lending engine.
- **Multimedia Designer**, Associated Newspapers (Jun 2017 – Jun 2018) · Cauldron Recording Studios (Jun – Sep 2016), Dublin.

SELECTED CASE STUDIES

Written up in full at tomg926.github.io/Tom-Garrett-Technical-Product-Management

Multilingual Contact Centre

VOICE INFRASTRUCTURE · DEC 2024 – JUN 2026

Product and delivery lead across 7 contributors, working directly with engineering on the data model, the conference and routing services, and the Twilio Voice SDK in the browser. Routing is row-locked so two callers can never be handed the same agent; the supervisor console deliberately surfaces online, available-in-database and available-in-Redis as three separate indicators, because in production those three disagree.

~5,000 calls a month · 9 languages in the IVR · 28 webhook and agent-action endpoints · 47 schema migrations against a live product

AI-Assisted High-Net Wealth Dashboard

PERSONAL WEALTH PLATFORM · OCT 2025 – AUG 2026

Two ingestion paths into a 22-table domain model — TrueLayer open banking for accounts and transactions, GPT-4o vision for pension and mortgage statements — feeding a retirement engine built for Irish rules. 0→1 from problem definition to production use by 100+ clients; the closing stretch was a test-suite rebuild that surfaced a bank integration which had never once produced a record.

22 domain tables · 24 screens, member and adviser · test-suite rebuild from 31.9% to 91.6% line coverage across 1,097 tests

Self-Updating AI Legal Knowledge Base

AI LEGAL INTELLIGENCE · JUN – AUG 2026

A knowledge base of US deposit law that keeps itself current and never writes to itself. Three Claude agents research the live web, adversarially fact-check each other, then emit schema-valid proposals a human reviewer accepts, edits or declines. The final stage is tool-free and schema-bound: fourteen required fields, enums tied to the application's own vocabularies.

3 agents per run · 51 US jurisdictions · 106 seeded articles · 128K streamed output tokens per stage

Human-Gated AI Move-Out Pipeline

WORKFLOW AUTOMATION PROTOTYPE · JUL 2026

A four-stage pipeline that works a move-out end to end, then stops — because the next step moves someone's deposit. Model tiers chosen by what kind of mistake each stage can make. Pointed at a real property-management export, it revealed the data model assumed gross figures where the document supplies an already-netted ledger: the finding that justified building it.

4 agents in the pipeline · 2 model tiers, by cost of error · ~\$0.10 estimated cost per statement

EDUCATION & FURTHER STUDY

- **Professional Academy Diploma, Advanced Artificial Intelligence for Business** — UCD Professional Academy. Jul – Nov 2026, in progress.
- **Computer Software Engineering** — Dublin City University, NFQ Level 8. Sep 2020 – Jun 2021, first-class honours (1.1).
- **BA (Hons), Digital Art** — IADT Dún Laoghaire, NFQ Level 8. 2013 – 2017, second-class honours (2.1).
- **New Frontiers, Phase 2** — Enterprise Ireland, TU Dublin. Oct 2022 – Mar 2023.
- **Professional Diploma, Digital Marketing** — Waterford Institute of Technology. 2018 – 2019.

RECOGNITION

- **New Frontiers Phase 2** recipient — TU Dublin.
- **Microsoft for Startups** portfolio — DocuDynamics.
- **The Sunday Times**, Business section, July 2020 — on how Irish SMEs can become data-driven.
